PROFILE

Quantitative associate with an M.S. in Machine Learning and Data Science. Experience spans financial forecasting, anomaly detection, contextual bandits, and LLM systems, supported by model validation and scalable data pipelines.

WORK EXPERIENCE

Wells Fargo

Charlotte, NC

Quantitative Associate — Risk Forecasting Analytics – Financial Crime

Jul. 2026 – Present

- **Design the knowledge layer** of a multi-agent LLM platform for anti-money laundering (AML) investigations, converting procedures, investigator training materials, and regulatory guidance into machine-executable skill specifications that drive agent reasoning across 16 typologies.
- **Build a map-reduce pipeline** over large policy corpora — chunk-level LLM extraction plus embedding-based clustering — reducing duplicate criteria by a factor of 15 while preserving source traceability; deploy locally hosted Gemma 3 12B models for PII masking before downstream processing.
- **Establish evaluation frameworks** for decision accuracy, evidence sufficiency, and reviewer agreement; lead iteration on prompt design, skill specifications, and challenger review.

Quantitative Analyst, Rotation Program — Treasury – Deposit Balance Modeling

Jan. 2026 – Jul. 2026

- **Owned model testing** for forecasts of a **\$270B** retail checking deposit portfolio, evaluating surge-reversal dynamics across macroeconomic, industry, and firm-specific drivers to inform **asset-liability management** decisions.
- **Designed and evaluated candidate specifications** across 100+ drivers, cutting 9-quarter average MAPE from the production model's 5.6% to 3.4%; diagnosed model instability and structural leakage through specification testing and sensitivity analysis in SAS and Python.
- Built Python pipelines to consolidate model outputs for governance and executive review; presented results, economic interpretation, and recommendations to senior Treasury stakeholders and model owners.

Quantitative Analyst, Rotation Program — Risk Modeling Group – Financial Crime

Jul. 2025 – Jan. 2026

- **Designed and ran NLP experiments** using **Latent Dirichlet Allocation**, **DistilBERT**, and internal LLM applications to extract, cluster, classify, and evaluate risk themes from large-scale unstructured financial text.
- **Benchmarked prompt strategies** for coverage, consistency, and interpretability, feeding the resulting model blind spots into downstream risk-model remediation; documented sensitivity testing in formal model-governance artifacts.

Quantitative Analytics Intern — Risk Modeling Group – Financial Crime

Jun. 2024 – Aug. 2024

- **Built and validated** a hybrid unsupervised-supervised AML detection framework across 80M+ accounts, improving the suspicious activity report (SAR) detection rate by 11% over the benchmark at constant alert volume.
- **Engineered the PySpark feature pipeline** behind the framework, applying outlier-robust transforms and explicit missingness handling to keep scores stable on sparse account histories.

Associate Data Scientist | Achieve — Marketing Analytics

Jun. 2022 – Jan. 2023 | San Diego, CA

- Developed contextual-bandit models using epsilon-greedy exploration and Thompson sampling for personalized loan and marketing recommendations, achieving a 6% conversion lift in online tests.
- Integrated Vowpal Wabbit into the training pipeline, ran A/B tests and production model diagnostics, and built dashboards to support marketing decisions.

APPLIED MACHINE LEARNING PROJECTS

Team Lead | Northwestern University Capstone Program - Beep

Sep. 2024 – Dec. 2024

- **Built a rider assistant** for Beep's autonomous shuttle network as a containerized Streamlit service on GCP with Vertex AI Gemini: a multi-stage intent cascade routing rider queries, a breadth-first route-planning engine returning minimum-transfer trips, and human-in-the-loop safety escalation over Cloud Pub/Sub.

Data Science Consultant | Northwestern University Practicum Program - Uniqlo

Sep. 2023 – May 2024

- **Applied Gemini vision-language models** to automate product image tagging, building the evaluation rubric with fashion-domain experts and tuning prompts against tag accuracy and recommendation relevance as business metrics rather than model-internal scores.

EDUCATION

Northwestern University — M.S., Machine Learning and Data Science

Sep. 2023 – Dec. 2024

University of California, San Diego — B.S., Data Science, Management Science; *magna cum laude*

Sep. 2019 – Mar. 2023

SKILLS

- **Languages & Data:** Python, SQL, R, SAS, Spark/PySpark, Pandas, NumPy, PostgreSQL
- **LLM & Agent Systems:** multi-agent orchestration, retrieval and embedding-based clustering, prompt and context engineering, LLM evaluation design, open-weight model deployment, PII redaction
- **ML & Statistics:** anomaly detection, supervised learning, NLP and topic modeling, time-series forecasting, contextual bandits, A/B testing, deep learning, model evaluation
- **Frameworks & Platforms:** PyTorch, TensorFlow, Hugging Face Transformers, scikit-learn, XGBoost, LightGBM, Vowpal Wabbit, GCP (Agent Platform, BigQuery), Docker, Git, Tableau
- **Certifications:** Google Cloud Professional Machine Learning Engineer; CFA Program Level I Candidate
